Webdesign & Hosting

Does your business need a Website that reflects your company's corporate image or product quality? Do you wish to let the internet work for you and help your business grow? Here at GyanTech, we are able to help you do so. We have the experience and the technological know-how to help make your Internet dreams a reality.

Different clients have different needs and requirements and therefore we do not develop a website just from looking at the angle of IT design application itself on its own. GyanTech prides itself in being different from other website designers. As website developers, we actually engage consultants in the areas of management, marketing and finance. We have our panel of experts in each respective industry to understand your business better so that we can undertake to develop a website that could really help you. We do not believe that our client should have a website just for the sake of having one. Your website needs to work for you and not the other way round.

We have to date provided numerous practical and workable website solutions to many clients from large corporations to the single unit business proprietor.

We offer professional web/graphic design and web hosting services to our clients. No matter what you may be seeking, be it a small personal site or an e-Commerce site, we have the talent, experience, and technology to meet your specific needs.

So when you engage GyanTech to develop your website, it is like engaging a team of professional marketing and internet business consultants who understand your needs and wants.

Choose from our recruiting and staffing services, information reporting or workforce management solutions. **GyanTech has the experience, expertise and resources to provide complete staffing solutions.**

GyanTech Perfect Fit[®] Program - recruiting, screening and hiring the most qualified candidates

GyanTech's Engagement Process is focused on you and your needs. This consultative approach known as our Perfect Fit Program details, from start to finish, how you will be presented with a perfect candidate.

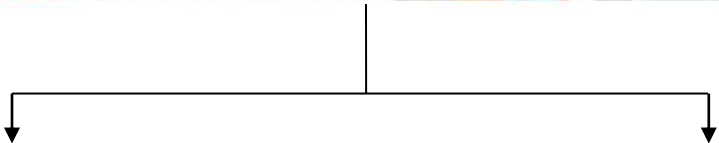

Our program includes five phases that features components customized to most effectively service your account:

- **Customer Analysis** to understand who you are and how we can be your perfect staffing partner.
- **Sourcing** to locate candidates through the local community, niche resources and on the Web.
- **Screening** to identify the desired skills, experience and temperament critical to a successful placement.
- **Selection** to make an offer and ensure the candidate is capable of meeting the job requirements.
- **Performance Monitoring** to continually provide the highest level of service in the staffing industry.

Through this program, we reduce your attrition costs from loss of productivity to re-hire and decrease the time associated with the recruiting process by effectively sourcing and screening the new employee.

- Practical HSE Courses

➤ **HSE Video & DVD**

Health & Safety videos are among the most creative videos made today. Typically they are produced to spearhead safety campaigns you're running, campaigns that need greater impact so they deliver changes in attitude and more certain learning outcomes.

Safety Campaigns may include

- Accepting new safe behaviors and procedures as the accepted norm in everyday work culture
- Redressing safety issues that have resulted in failed commercial tenders, or being taken off a tender list.
- Promoting safety awareness of major hazards, such as Danger Zones
- Changing PPE requirements, such as gloves, glasses, high lace-up boots etc
- Accident or incident reconstruction and investigation, with clear "lessons learned" and learning outcomes
- Whatever is central to safe behavior in your organization!

We provide a comprehensive health & safety video production service

- Script, storyboard and creativity
- Full shoot and edit
- Post production, graphics and audio production
- Interactive learning sections with multiple choice questions
- Delivery as DVD, MPEG2 and web stream

Creativity in Health & Safety video

We individually examine your safety campaign with you. Collectively we arrive at a creative approach that will motivate your workforce towards safer behavior, and greater compliance with your safe systems of work. These creative approaches to video may vary widely

CGDM – Collaborative Global Development Methodology

Uniqueness for GyanTech is its maturity of the development models that are being successfully used. Through the years GyanTech has evolved and refined CGDM (Collaborative Global Development Method), geared towards delivering high-quality, robust solutions in the Internet time. Working in tandem, our on-Site/off-Shore teams execute a hectic 'Follow the sun' development schedule for our clients.

➤ Overall development life cycle is as follows:

1. Identify requirements by conducting preliminary discussions with the client to determine project scope and expectations.
2. Specify a solution by collaborating with the client to define the complete system functionality. Architecture and Functional Specifications are defined here.
3. Fulfill estimating and resource planning.
4. Create, test, document, and deliver the solution to the client.
5. Perform acceptance testing by integrating the solution into the client's baseline software or environment.
6. Mentor the client to ensure that the knowledge transfer is complete.

We use 3-Dimensional servicing models that cater every customer's needs.

- 100% on-Site
- 100% off-Shore
- On-Site & off-Shore

100% on-Site

In this service dimension, we place our engineer at client's site for a certain period of time mutually agreed in advance.

100% off-Shore

In this model the customer should have the requirement specifications completely developed. Also it is important to have at least one technical lead present from the customer's side in order to be engaged at the time of

Requirement understanding, functional specs approvals, architecture planning, testing and deployment.

On-Site & off-Shore

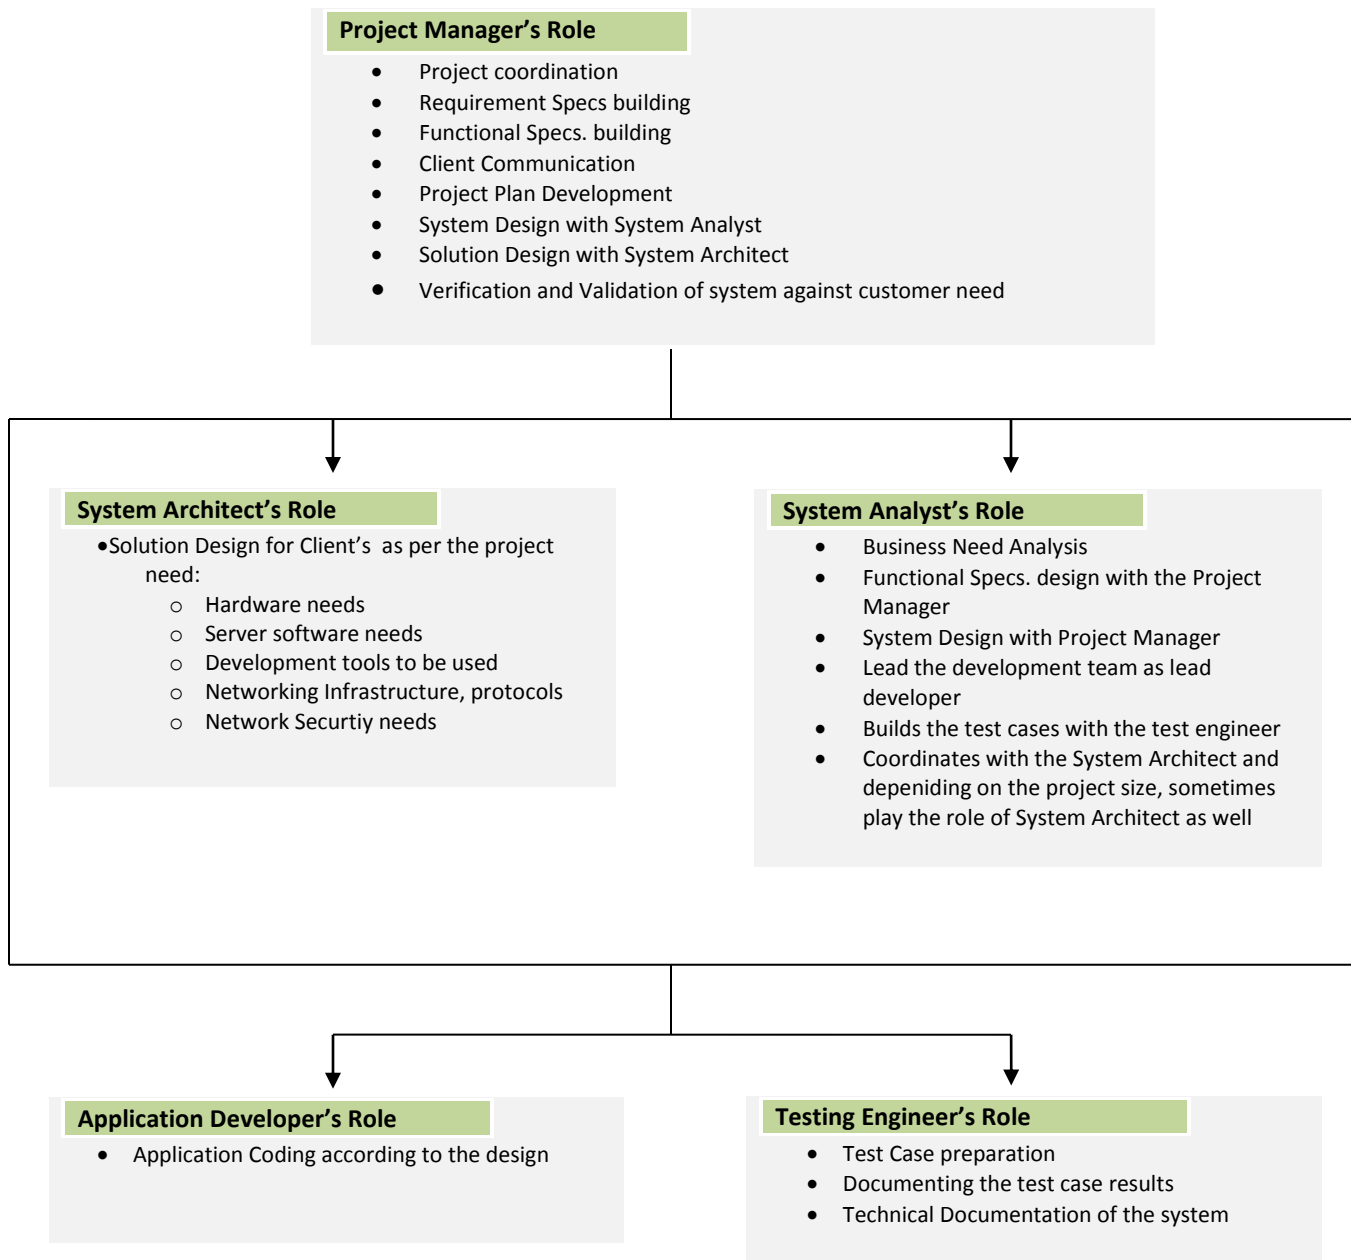

In this model, we place one of our senior professional/professionals at customer site for a mutually agreed period. The on-Site staff performs many tasks in collaboration with the client and the off-Shore team. 70% to 75% work is done off-Shore in this model, which in turn reflects huge savings to customers. This model suits most customers, especially for medium to large size projects.

Activity	On-Site	Off-Shore

To stay competitive, GyanTech professional team comprises of professional persons with experience, qualification, and an insight to implement technological changes. They not only maximize the use of existing systems, but also apply and explore new technology continuously and effectively. They have the capability to make automation truly easy and ensure satisfying results.

A typical project team structure is as follows

Quality Assurance And Testing Division

GyanTech is organized to ensure that all of its team members have proven aptitude and expertise to provide thoroughly-tested and bug free software projects to fit its client's specific information technology need. The Quality Assurance Division ascertains that at every stage, the internal standards are maintained and the user's requirement is complied with.

The Division tests the application from Development to the end user level and is involved from the very beginning of the development process. They prepare test cases, document results, and do the unit and module testing as and when the development is done.
